Sony D-22 portable Diskman forsale

Good condition, flawless.

Costomer AC adapter : 6v DC power supply (tested 9v DC)

- * The factory adapter was tested 12v DC (AC 110v input) at the time I bought it three years ago. When using it, a lot of heat was generated inside the CD machine. Of course I wouldn't use it to risk this baby's life. Maybe that's why so many owners always complain about their portable machine going kaput after a short time usage.

- * 9v DC factory suggested
